Who we are: CanTrust Hosting Co-op

We are a local worker co-operative, formed in 2009.

- We provide managed Canadian hosting for Drupal and Wordpress websites.

- We run our entire business using 100% Open Source software.

We live and work on the territories of the Squamish (Sḵwx̱wú7mesh), Tsleil-Waututh (səl̓ilw̓ətaʔɬ), Musqueam (xʷməθkʷəy̓əm), Kwantlen (qʷa:n̓ƛ’ən̓) and Sto:lo (Sʼólh Téméxw) Nations

What exactly is Open Source?

- Open Source is software source code developed in public, by group collaboration, over the Internet.

- Often hundreds of volunteers will work together on a single project and then release it for free.

- Open Source powers almost everything around us these days.

Why Open Source?

- Data Security: Public nature of the source code means improved Security.

- Data Privacy: You can run it yourself, and be in control of your data.

- Price – Cheaper to run than the paid software alternatives.

Open Source website technology is <u>accessible</u>

- The software being free reduces barriers to entry. Now everyone's using it!

- Worpress – Easy, Ubiquitous and Long Lasting. Powers >60% of websites!

- Drupal – Difficult but Rewarding, Powerful but fussy!

Reliable long-term hosting is <u>hard</u>. Because... the Internet is a scary place.

hackers

human error

What we actually do: Managed Open Source

- That's where we come in!

- We handle all those hard parts for you,
- after your site is built, so you are free
- to work on what you do best.

- We are extremely proud of our
- community and its collective impact.

Now, we are doing the same thing for software tools

- In the 2020s, **everything** is delivered from the cloud, including the basic tools used to get work done.

- Two large corporations control everything, and both use a per-user/per-month pricing model to maximize profit.

- Many great Open Source alternatives exist, but as with hosting it is very difficult to do well enough to depend on, unless you're an expert.

Introducing: CanWork Cloud

The world's best Open Source work apps, together in one managed platform.

Know where your data is

canWork.Cloud

CanWork Cloud – User Interface

- A complete replacement:

- Google Workspace

- Microsoft 365 / Teams

- Zoho

- Trello / Wrike / Asana

- Jira

- ZenDesk

- & so many more
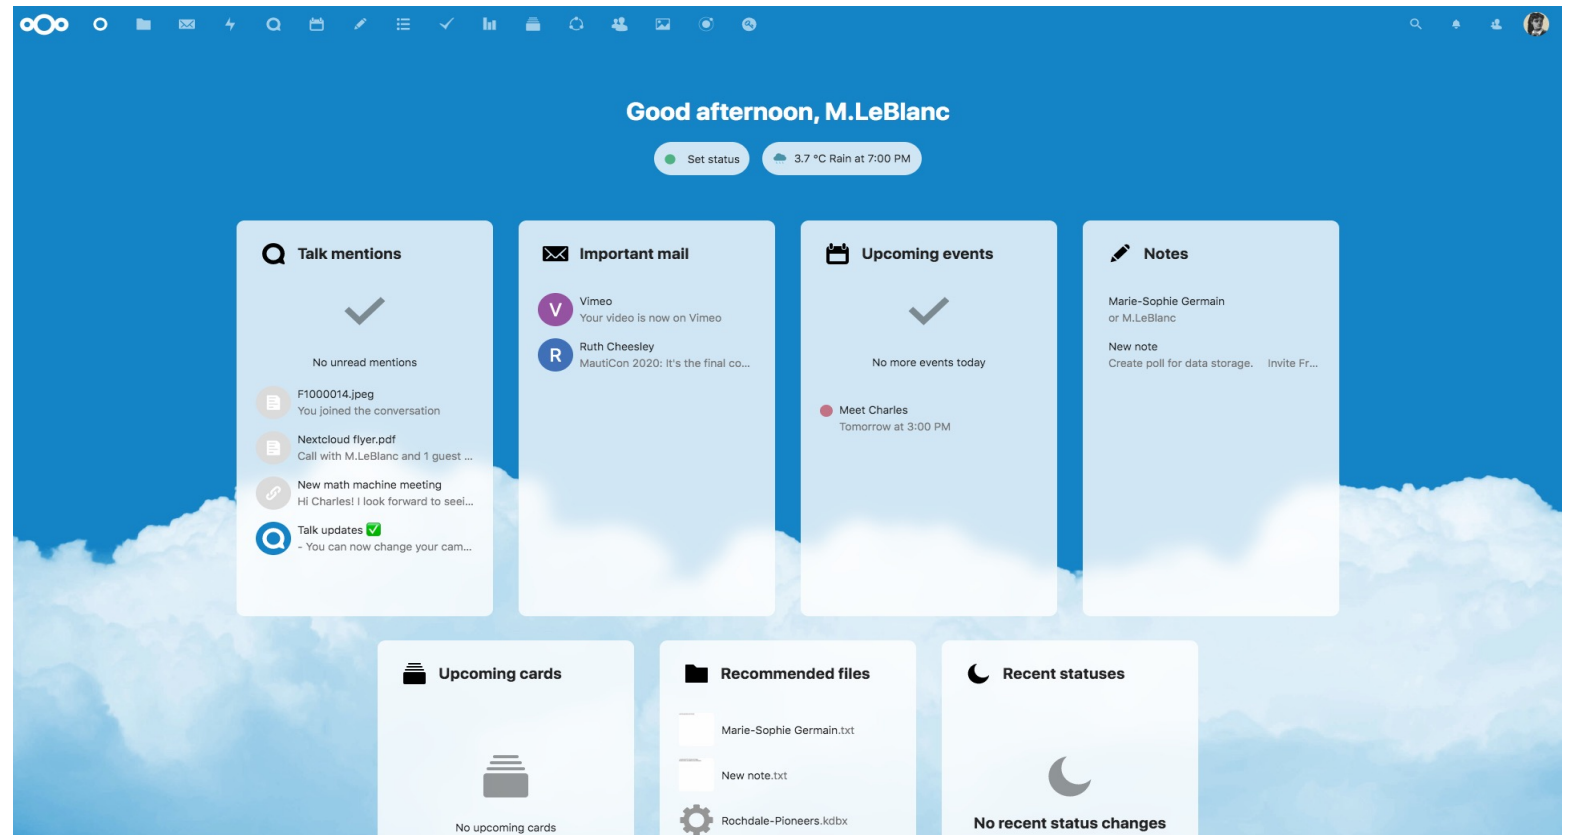

CanWork Cloud – File Sharing

- Rich, modern file sharing

- Familiar web interface

- Secure and simple.

- Also provides cloud backup
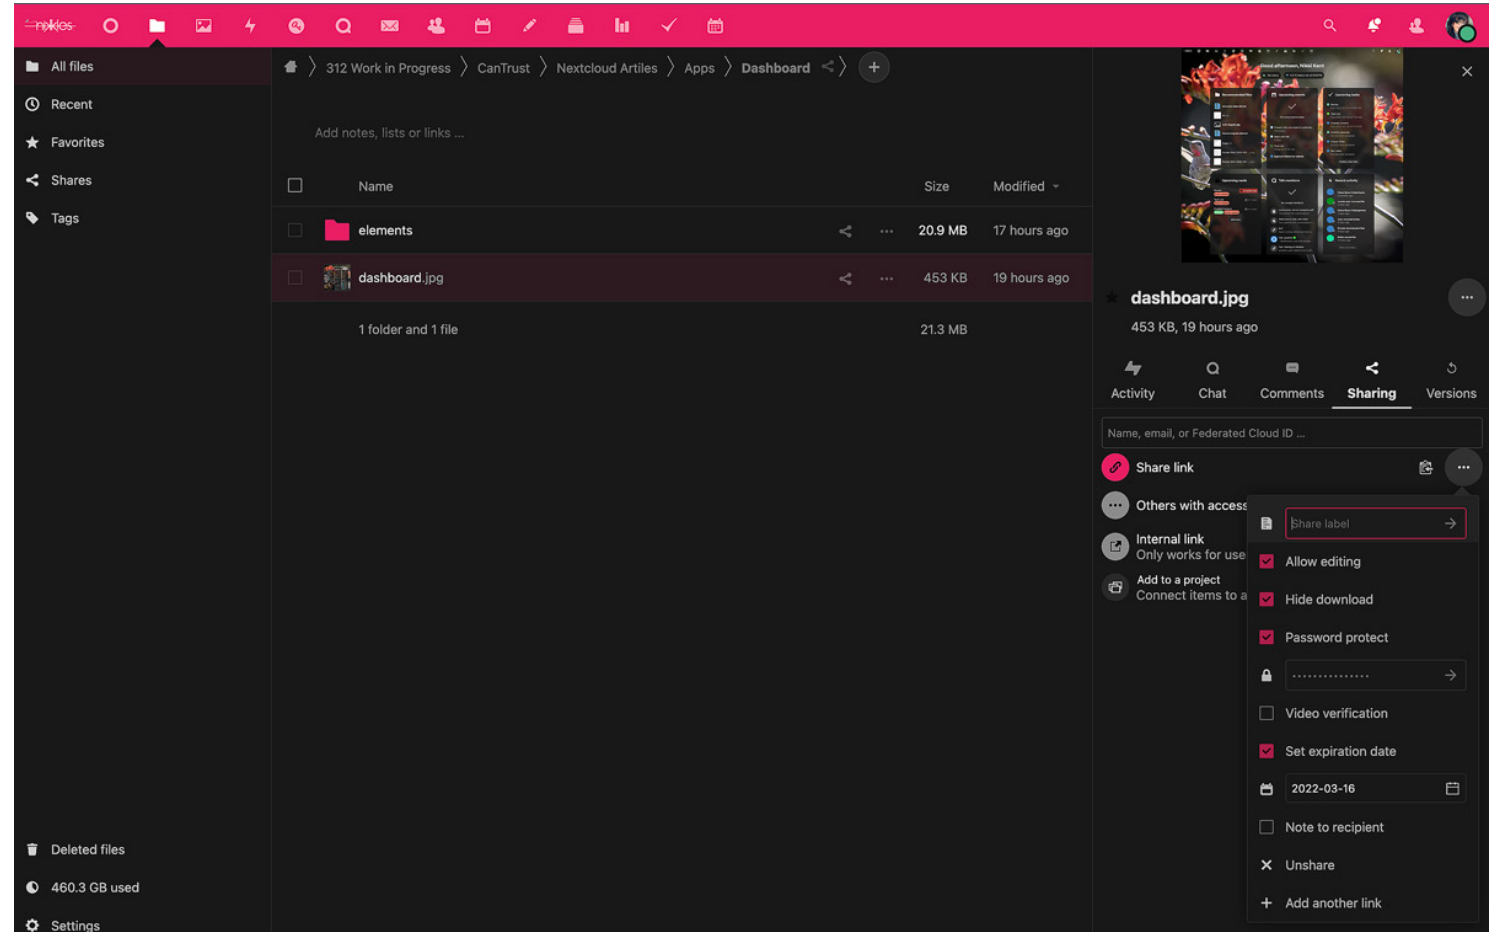

CanWork Cloud – Kanban PM

- Organize tasks in a kanboard

- Create reminders, chats, and tasks out of kanboard items.

- Collaborate with anybody internal or external.
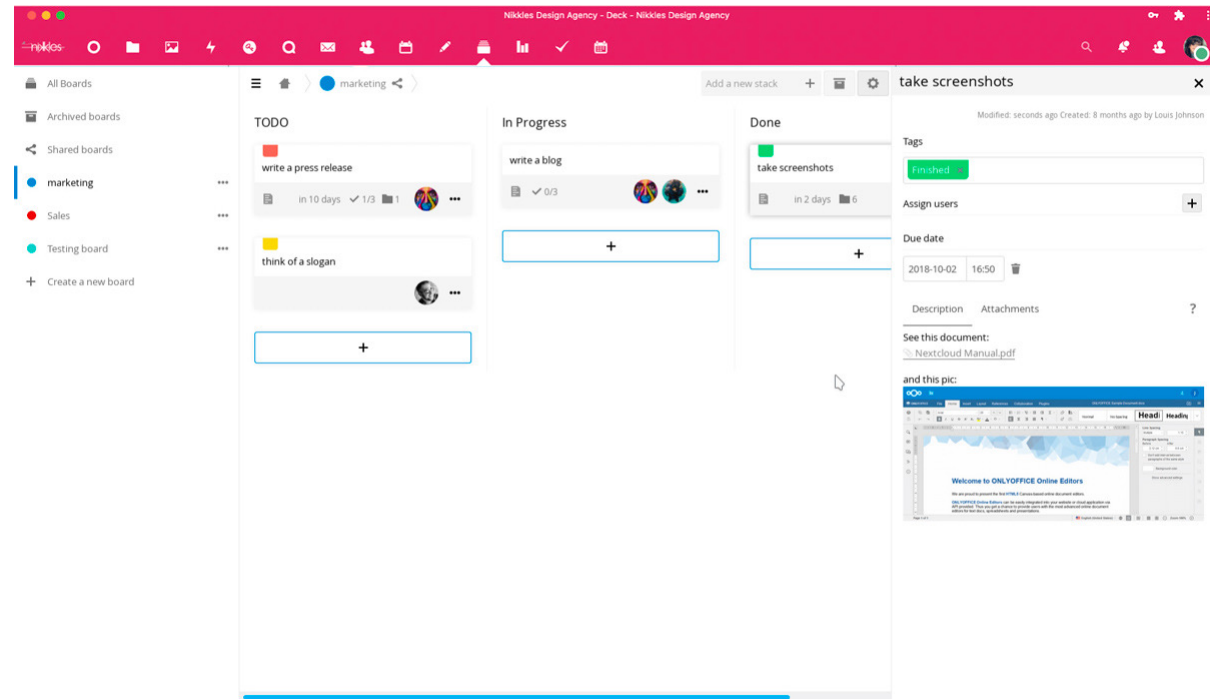

CanWork Cloud – Nextcloud Office

- Office (doc/sheet/preso) right in your web browser. Edit documents live with your team.

- Or, use the sync apps and edit with your favourite office program.
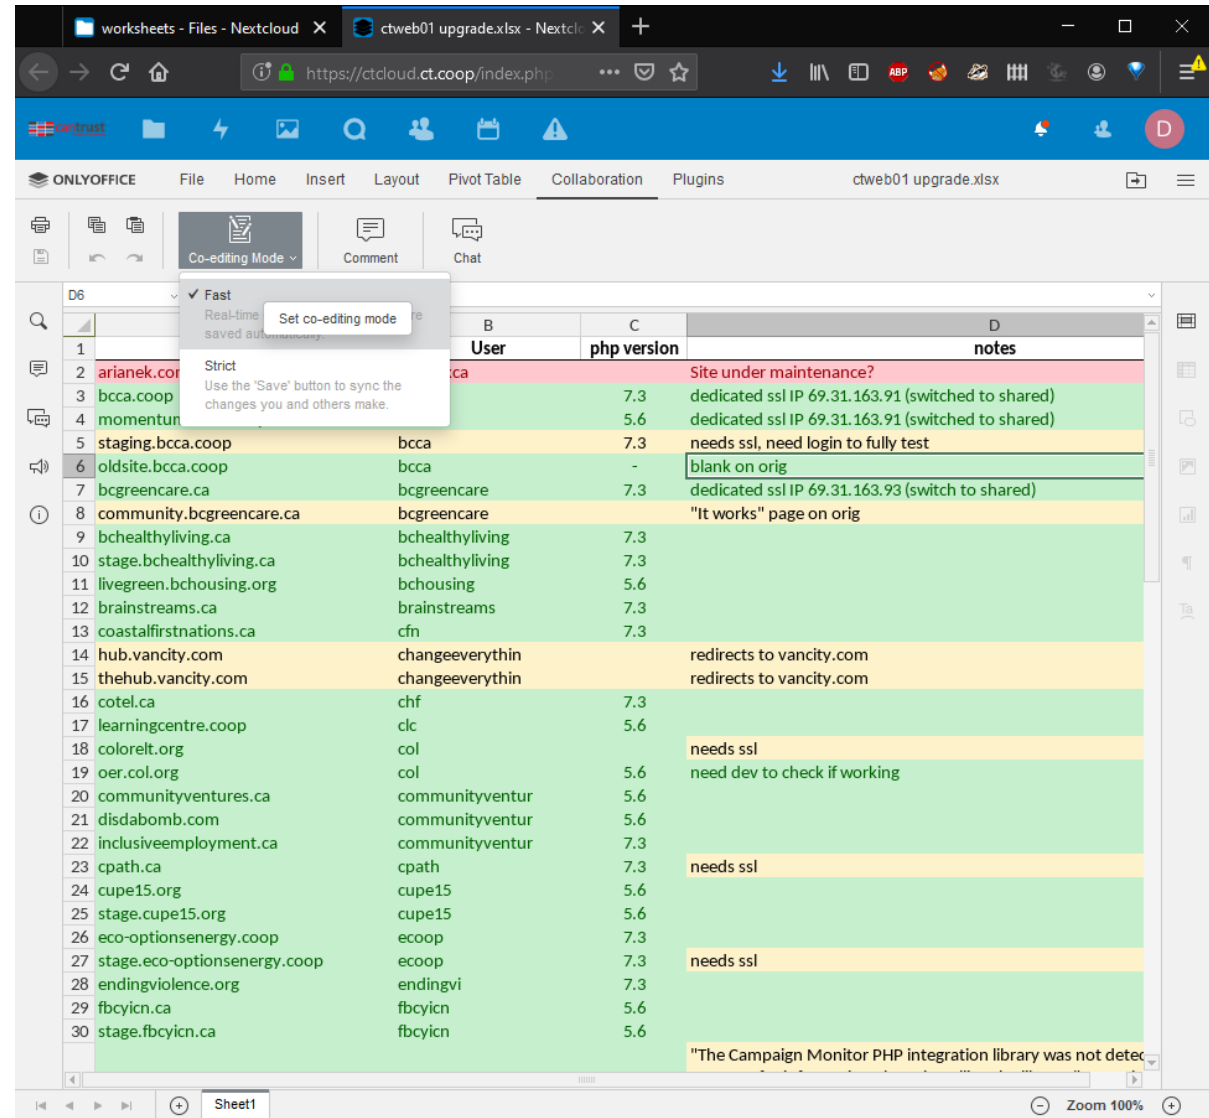

Slack Replacement: Element + Matrix

- Slack can be replaced with the open source "Element" chat program, hooked up to the "Matrix/Synapse" chat server.

- No per-user cost, no limit on number of messages or number of users. No barriers!

- Federate with anyone else on Matrix, because...it's the future!
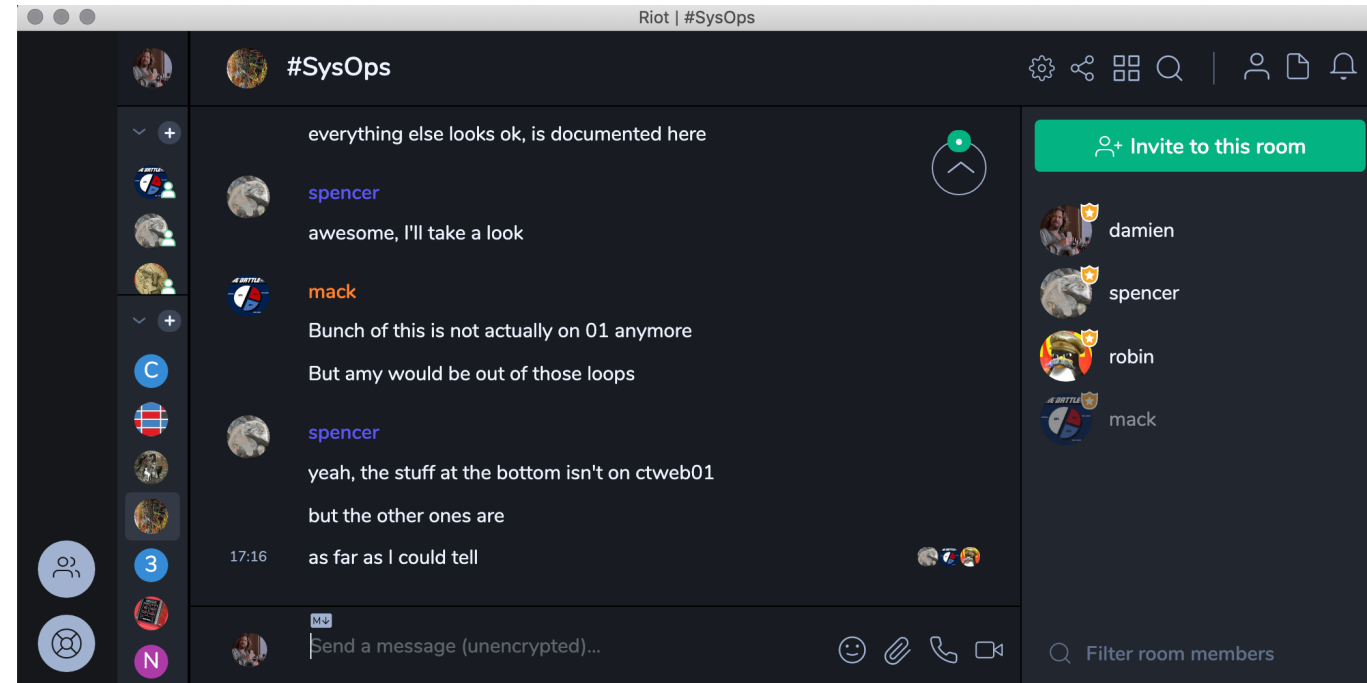

Nextcloud Apps: Polls

- Replaces the "free" Doodle app (which is covered in ads and spies on everybody and is definitely not really free).

- Book a meeting time or any other poll structure, right from Nextcloud.

Co-operative Pricing Model

- Because it's open source, we can deliver it with <u>fair pricing</u>

Co-operative Pricing Model

- Starts out $/user (low barrier to entry)

- Larger clients (50+) convert to fair per-usage billing.

- "Your business can sky rocket, but your costs won't!"
